

# Mid North Coast LHD

	ABORIGINAL PEOPLE	NON-ABORIGINAL PEOPLE
Number of residents	12,927	199,234
Surveys sent	1,057	3,228
Surveys returned	206	1,515
Response rate	19%	52%
Respondents per 100 hospitalised patients†	9	4

Overall, how would you rate the care you received while in hospital?

## At a glance

Aboriginal people make up approximately 6% of the residents in Mid North Coast LHD.

Completed surveys were received from 206 Aboriginal patients (approximately 9% of adult admitted Aboriginal patients in 2014).

In Mid North Coast LHD, there was only 1 question for which Aboriginal patients were less positive than non-Aboriginal patients by 10+ percentage points. In other LHDs, this ranged from 0 to 43 questions.

For the question about giving information to the patients' family, there was a 10 percentage point gap. For the same question there was a 24 percentage point in Murrumbidgee LHD.

Nurses were featured in most of the questions with the biggest gaps in Mid North Coast LHD.

## In Mid North Coast LHD do Aboriginal and non-Aboriginal patients' experiences of care differ?

Percentage point difference between responses from Aboriginal and non-Aboriginal patients

### Questions with the biggest gaps

1. Family or someone close given 'right amount' of information about condition or treatment
2. Nurses were 'always' kind and caring
3. Nurses were 'always' polite and courteous
4. 'Always' got the opportunity to talk to a nurse when needed
5. Nurses 'always' knew enough about patient's care and treatment

## Do Aboriginal patients' experiences of care differ from Aboriginal patients elsewhere in NSW?

There were **no** questions for which Aboriginal patients in Mid North Coast LHD were less positive than Aboriginal patients in NSW

For **4** questions, Aboriginal patients in Mid North Coast LHD were **more** positive than Aboriginal patients in NSW

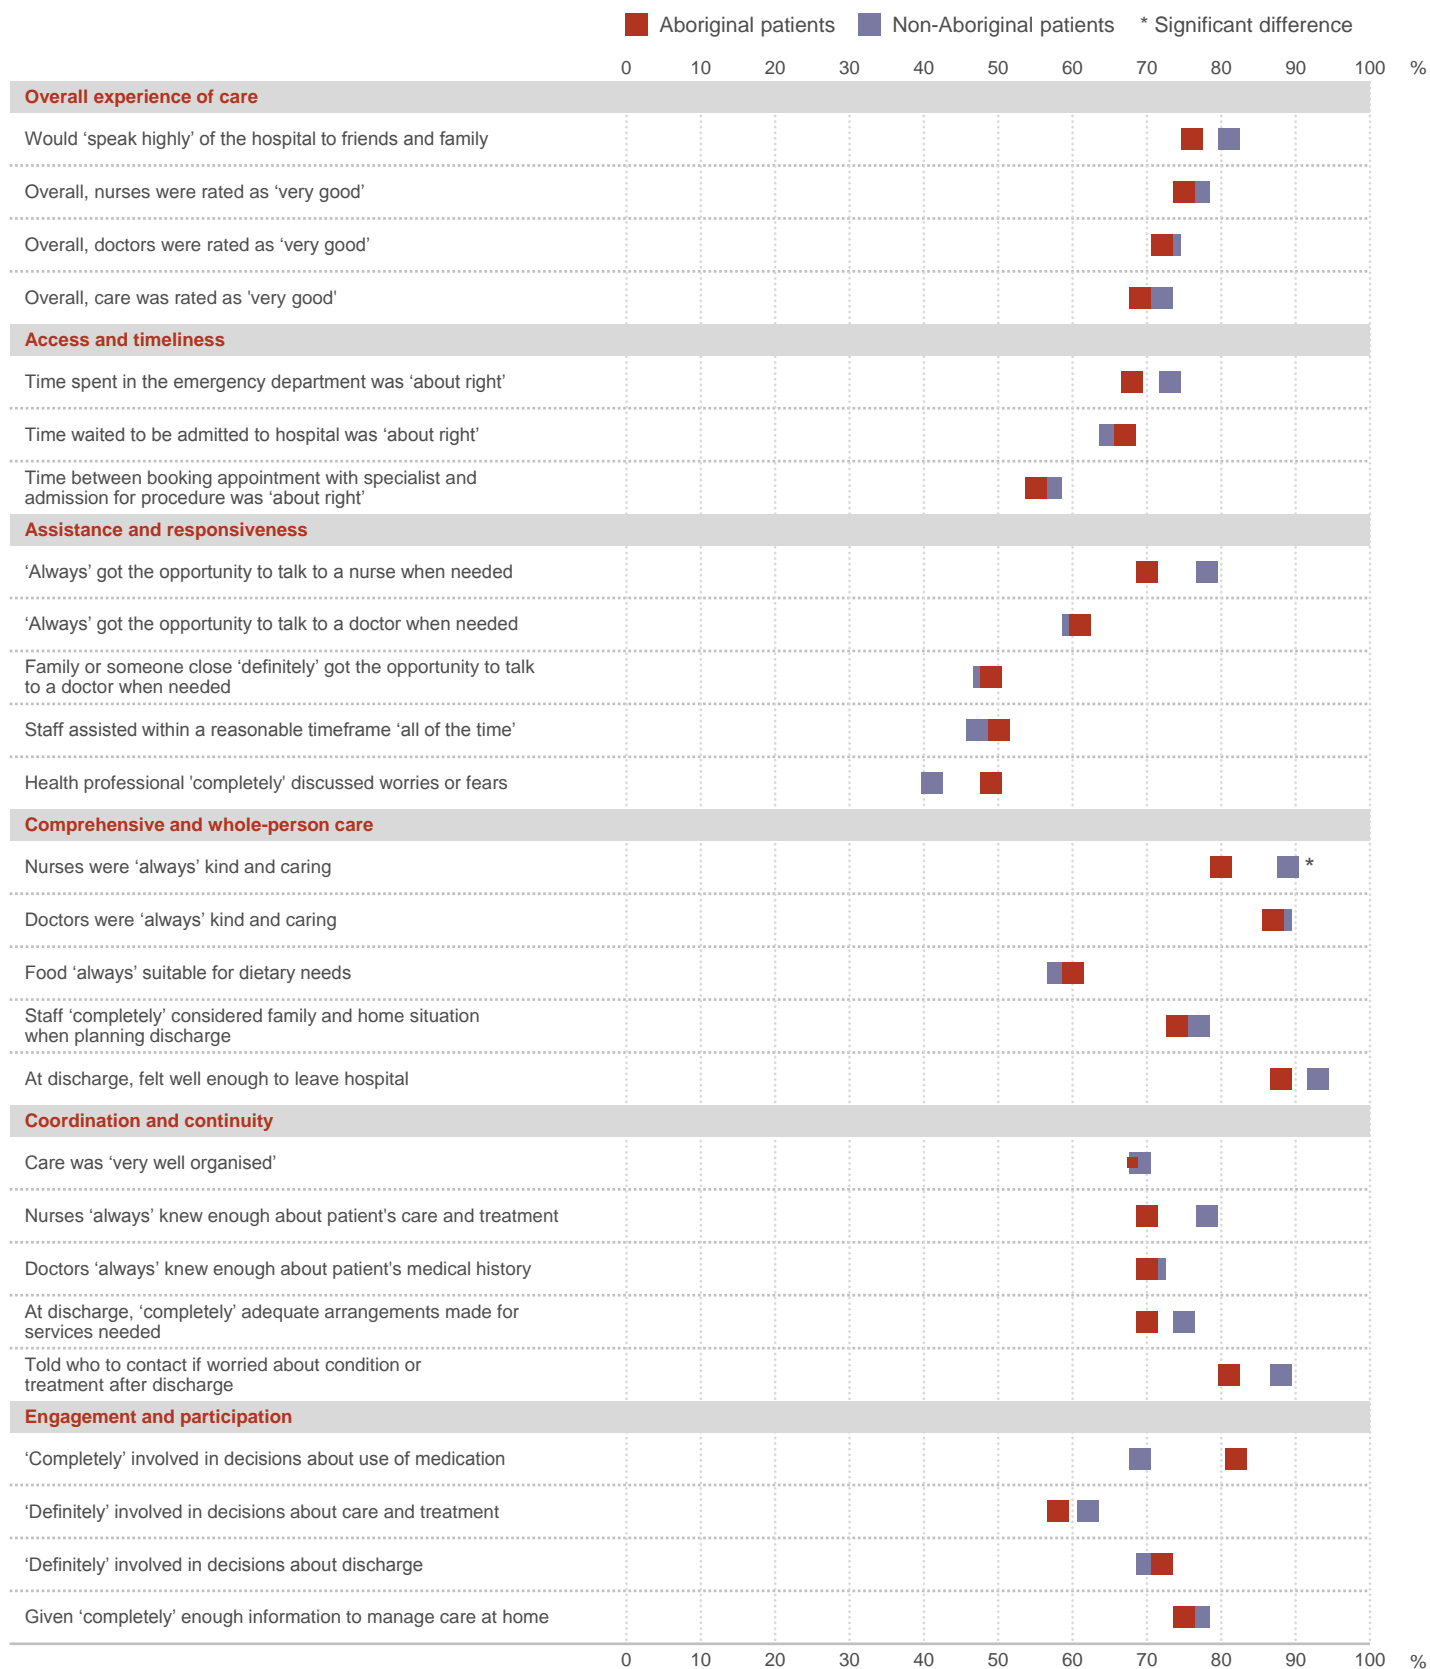

# Results at a glance: Aboriginal and non-Aboriginal patients

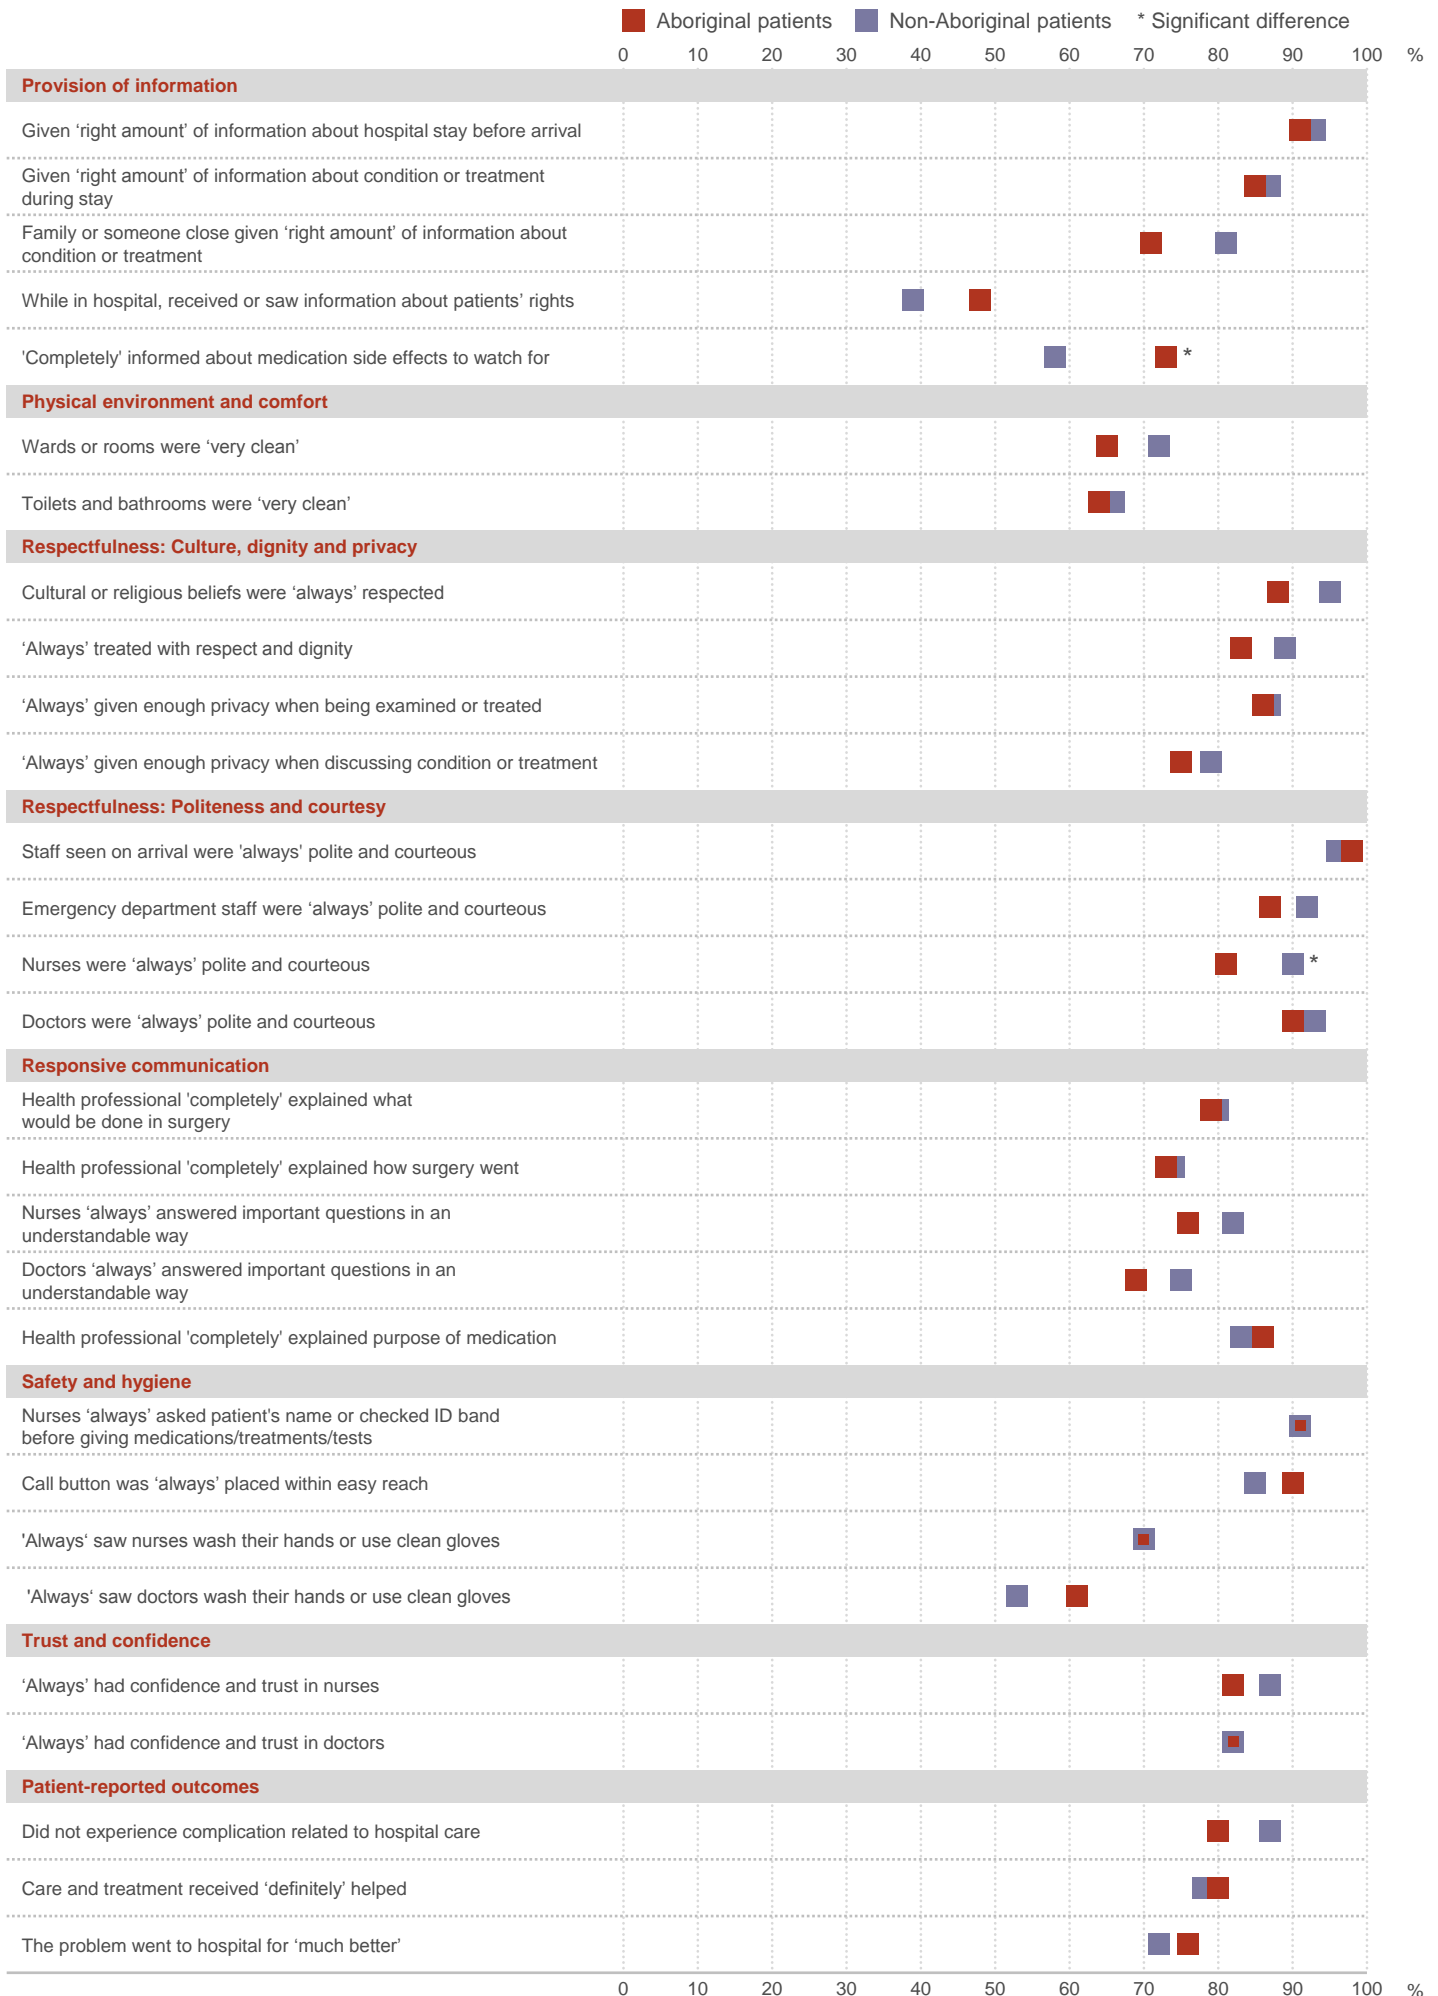

This profile is based on responses to 55 survey questions about experiences of hospital care for adult admitted patients.

Results presented in Figure 1 compare the experiences of care of Aboriginal and non-Aboriginal patients in Mid North Coast LHD by question and theme.

The proportion of patients who selected the most positive response category for each question is shown. An asterisk is shown where the result for Aboriginal and non-Aboriginal patients was found to be significantly different. Where the number of respondents was under 30, no results are shown.

Figure 1 LHD results for all questions, most positive response category: Aboriginal and non-Aboriginal patients

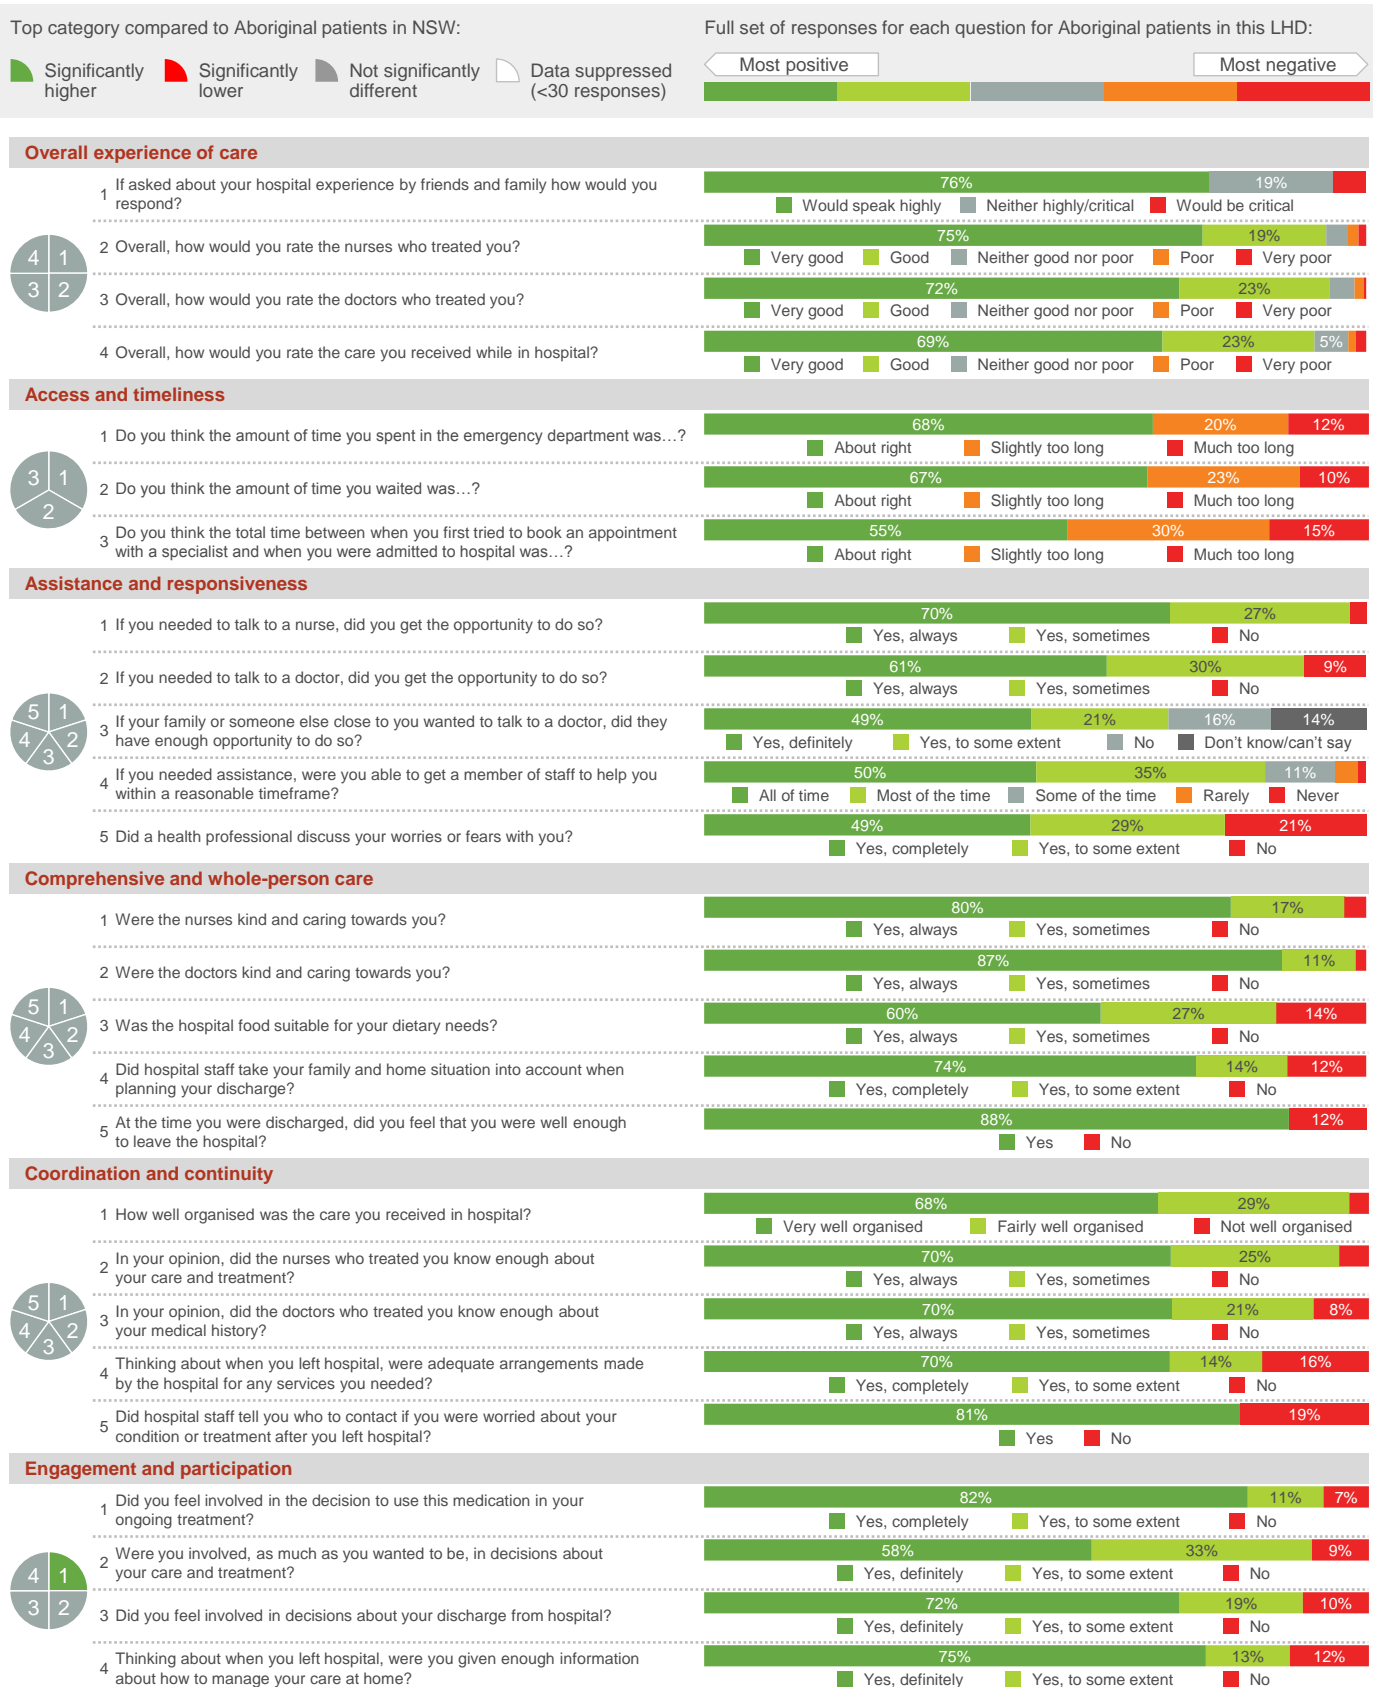

# Results at a glance: Aboriginal patients only

Results presented in Figure 2 show the full set of responses given by adult admitted Aboriginal patients in Mid North Coast LHD. The circle diagrams on the left indicate the significant differences between the proportion of Aboriginal patients in this LHD and those

from all adult admitted Aboriginal patients in NSW who selected the most positive response category (the top category). The stacked bar charts on the right show the proportion of Aboriginal patients in this LHD who selected each response category.

Figure 2 LHD results for all questions, all responses: Aboriginal patients

Top category compared to Aboriginal patients in NSW:

Full set of responses for each question for Aboriginal patients in this LHD:

**Provision of information**

**Physical environment and comfort**

**Respectfulness: Culture, dignity and privacy**

**Respectfulness: Politeness and courtesy**

**Responsive communication**

**Safety and hygiene**

**Trust and confidence**

**Patient-reported outcomes**

## About the report

This profile is a supplement to BHI's report *Patient Perspectives: Hospital care for Aboriginal people*. The report details the results from the oversampling of Aboriginal patients in the 2014 Adult Admitted Patient Survey (AAPS). The oversampling was undertaken to allow sufficient numbers of Aboriginal respondents for reporting results at an LHD level.

Questionnaires were mailed on a monthly basis to patients who were admitted to one of 80 NSW public hospitals (peer groups A-C) between January and December 2014. Approximately 70,000 surveys were mailed to patients across NSW, including around 13,000 to Aboriginal patients.

The response rate for Aboriginal patients across NSW was 21%. Among non-Aboriginal patients, the response rate was 44%<sup>^</sup>.

In line with the report, this profile focuses on 55 of the 106 questions asked in the questionnaire. These questions were selected with input from a project advisory committee and cover a range of themes considered important for assessing hospital care for Aboriginal people.

Survey results were weighted by age group and stay type (i.e. same day or overnight inpatients) in order to be representative of patients within each hospital and LHD. Results are deemed to be significantly different where the 95% confidence intervals of two estimates do not overlap.

For some LHDs, the relatively small number of Aboriginal respondents to the survey meant that significant differences between their results and that of comparison groups may not have been detectable. Therefore, in addition to presenting significant differences, the percentage point difference in the gap between Aboriginal and non-Aboriginal patients is also reported.

### Identifying Aboriginal patients

This report uses the term 'Aboriginal people' to refer to Aboriginal and Torres Strait Islander people, in line with the NSW Health policy, which recognises that Aboriginal people are the original inhabitants of NSW.

The sample of Aboriginal patients mailed the survey was identified through the Admitted Patients Data Collection (APDC).

The results of the survey are shown by Aboriginal and non-Aboriginal patients as defined by responses to the survey question: *Are you of Aboriginal origin, Torres Strait Islander origin, or both?* Those who did not answer the survey question were excluded from the analyses.

<sup>†</sup> Estimated coverage of adult admitted patients in 2014 within the survey scope.

<sup>^</sup> The response rate for non-Aboriginal patients was adjusted to compensate for a planned oversampling of younger patients.

More information about the oversampling of Aboriginal patients and the methods used to gather and analyse the survey data can be found in the *Technical Supplement – Adult Admitted Patient Survey 2014* available at [bhi.nsw.gov.au](http://bhi.nsw.gov.au)
