St Vincent's Hospital, Darlinghurst: Total bed days, potentially avoidable admissions for COPD and CHF

July 2005 to June 2010 (monthly)

(*) Suppressed: relative standard error $\geq 40\%$. (†) Interpret with caution: $30\% \leq$ relative standard error $< 40\%$.

1. A hospitalisation corresponds to one 'episode of care'. A single patient can have multiple hospitalisations in the time period.
2. Excludes hospitalisations for renal dialysis, obstetrics, psychiatry, and all surgery.
3. Potentially preventable hospitalisations as defined in: *The health of the people of NSW – Report of the Chief Health Officer 2010*.
4. For criteria used for COPD / CHF admissions, see *Technical Supplement* at www.bhi.nsw.gov.au
5. Rates are directly standardised to the NSW admitted patient population 2009-10 on the basis of age, sex, and socioeconomic status.
6. Index of Relative Social Disadvantage (IRSD), as defined by the Australian Bureau of Statistics.
7. Smoking status as recorded on admission: termed *current* if patient smoked tobacco within last month; *previous* if patient smoked tobacco in the past but excluding last month.
8. We use the term Aboriginal, rather than Aboriginal and Torres Strait Islander in line with NSW Health usage, which recognises that Aboriginal people are the original inhabitants of NSW.
9. Postcode of usual residence at time of admission classified as outer regional or remote.
10. Admissions with emergency status of 'non-emergency / planned'. (‡) Emergency Department

Note: Only records with valid and non-missing data are included in each analysis.

Note: Length of stay and total bed days calculated on 'acute' episodes only (comprising 98.7% COPD and 97.4% CHF PAAs).

Note: Additional detail and definitions can be found in the Bureau's *Technical Supplement* at www.bhi.nsw.gov.au
