Chronic Disease Care: A piece of the picture

Performance Profiles: Potentially avoidable admissions for COPD and CHF, July 2009 to June 2010

The Insights Series. Volume 2, PART 1

In July 2011, four errors were identified in the Bureau's web documents *Performance Profiles: Potentially avoidable admissions for COPD and CHF*. The corrections below were made and the performance profiles documents (first published on 23 June 2011) were reissued on the 8 July 2011.

Concord Hospital: COPD admissions in 2009-10 were misreported as 269 rather than 289.

Concord Hospital: Activity profiles, potentially avoidable admissions for COPD and CHF
July 2009 to June 2010

		Same period last year	Change since one year ago
Total hospitalisations ¹	49,132	46,701	5%
Select medical hospitalisations ²	16,858	16,005	5%
Total potentially preventable hospitalisations ³	3,074	3,138	-2%
Chronic Obstructive Pulmonary Disease (COPD) admissions ⁴	289	269	7%
Congestive Heart Failure (CHF) admissions ⁴	303	385	-21%

Orange Base Hospital: Total potentially preventable hospitalisations in 2008-09 were misreported as 1,539 rather than 1,549.

Figures corrected
on 8th July 2011

Orange Base Hospital: Activity profiles, potentially avoidable admissions for COPD and CHF
July 2009 to June 2010

		Same period last year	Change since one year ago
Total hospitalisations ¹	19,155	18,323	5%
Select medical hospitalisations ²	4,194	3,917	7%
Total potentially preventable hospitalisations ³	1,699	1,549	10%
Chronic Obstructive Pulmonary Disease (COPD) admissions ⁴	162	160	1%
Congestive Heart Failure (CHF) admissions ⁴	117	87	34%

1. A hospitalisation corresponds to one 'episode of care'. A single patient can have multiple hospitalisations in the time period.
2. Excludes hospitalisations for renal dialysis, obstetrics, psychiatry, and all surgery.
3. Potentially preventable hospitalisations as defined in: *The health of the people of NSW – Report of the Chief Health Officer 2010*.
4. For criteria used for COPD / CHF admissions, see *Technical Supplement* at www.bhi.nsw.gov.au

ERRATUM (continued)

Tamworth Base Hospital: Total potentially preventable hospitalisations in 2009-10 were misreported as 1,762 rather than 1,768.

Tamworth Base Hospital: Activity profiles, potentially avoidable admissions for COPD and CHF
July 2009 to June 2010

		Same period last year	Change since one year ago
Total hospitalisations ¹	19,805	18,561	7%
Select medical hospitalisations ²	4,896	4,540	8%
Total potentially preventable hospitalisations ³	1,768	1,673	6%
Chronic Obstructive Pulmonary Disease (COPD) admissions ⁴	185	152	22%
Congestive Heart Failure (CHF) admissions ⁴	139	142	-2%

The Tweed Hospital: Total potentially preventable hospitalisations in 2008-09 were misreported as 2,708 rather than 2,709.

Figures corrected
